✓ Cartridges are quick and easy to replace

✓ Stylish separate tap for your pure filtered drinking water

1 MICRON SEDIMENT FILTER AND 0.4 MICRON CARBON FILTER

The Twin Undersink: two filters, double the filtration

STAGE 1: 1 MICRON POLYPROPYLENE SEDIMENT PRE-FILTER

This superfine filter is designed to mechanically remove sediment particles. Grit, dust, rust, mud, algae – all of these are removed in this first stage of filtration.

This first purification also prevents the second stage carbon filter from being damaged by large particles. In this way, the first filter extends the life of the carbon filter, which has a much finer mesh for second phase filtration.

REMOVES

- Sediment
- Rust
- Scale
- Slime
- Dirt
- Mud
- Algae
- Asbestos
- Insect Remains

STAGE 2: 0.4 MICRON CARBON POST-FILTER

This is the heart of the system. A special high-grade carbon cartridge with unique absorption qualities ensures that your water is filtered and purified in this second phase.

An ultrafine carbon 'super block' filter effectively removes all chemicals, chlorine, pesticides, unpleasant tastes and odours, along with harmful heavy metals. Made from premium coconut shell carbon, this second stage filtration provides fresh drinking water that has a sweeter taste.

The double filtration of the Twin Undersink ensures you and your family always have fresh and healthy drinking water.

Clean&Clear water: The cleanest water on tap.

SPECIFICATIONS

Filter output	5,000L*
Max flow rate	Litres per minute
Dimensions (cm)	32(H) x 23 (W) x 11.5 (D)
Micron rating	0.4 micron

* Recommended cartridge change: both the sediment filter's cartridge and the carbon filter block can be used for a full year before being replaced.

Lifetime Warranty

QUALITY COMPONENTS

Stainless steel bracket and screws

Non-corrosive, superior strength and long lasting

Quick-connect fittings and tube

Made in the UK

High-grade pressure housings

Made in the USA
